

# Sprawdzenie samej listy IPv4 kart sieciowych

Wszystkie komendy uruchamiamy w powershell.

Komenda ipconfig:

```
ipconfig /all | findstr /I "Adapter | Descripton | IPv4"
```

Komenda Get-NetAdapter, z ładniejszym formatowaniem)

```
Get-NetAdapter | ForEach-Object {  
    $adapterName = $_.InterfaceAlias  
    $ipv4 = (Get-NetIPAddress -InterfaceAlias $adapterName -AddressFamily IPv4).IPAddress  
    [PSCustomObject]@{  
        "Karta sieciowa" = $adapterName  
        "Adres IPv4"     = $ipv4 -join ", "  
    }  
} | Format-Table -AutoSize
```
